

Antonn Esquivel

Staff Front-End Engineer · Design Systems & Web Platform

Toronto, Ontario, Canada · esquivel.anton@gmail.com · linkedin.com/in/anton-esquivel · github.com/ton03

SUMMARY

Front-end engineer with 12 years of experience, most of it on design systems: the shared component libraries product teams rely on. Builds the platform, then drives the adoption work that makes it useful across real products. Leads development of Market, Square's React component library, and the company-wide migration onto it. Drives UI and UX consistency across products, with close attention to design fidelity, semantics, accessibility, and interaction detail.

CURRENTLY

Making agents useful in production design system work: automating repetitive migrations while engineers own product judgment, APIs, accessibility, and quality.

SKILLS

Languages: TypeScript, JavaScript, Python

Frameworks & Libraries: React, React Router, Stencil

Design Systems: Component libraries, Design tokens, Theming, CSS architecture, Web Components, Headless primitives, Accessibility (WCAG, ARIA)

AI-Assisted Workflows: Agent skills & rules authoring · Claude Code, Codex, Amp, Cursor

Testing: Vitest, Playwright, Cypress, Storybook, Visual regression, React Testing Library

Build & Infra: Nx, Vite, ESLint, Stylelint, CI/CD, SSR

Design: Figma, Photoshop, Illustrator · Web, product & graphic design · Design-to-code with Claude

EDUCATION

BS Computer Science

De La Salle University
Manila, Philippines · 2013

EXPERIENCE

Staff Front-End Engineer Oct 2021 – Present

Block (Square) Toronto, Canada · Remote

- Lead Market, Square's React design system, shaping component APIs, accessibility, tokens, and adoption patterns for product teams across Square
- Drive the monorepo-wide migration of Square web surfaces onto Market, reducing thousands of legacy-importing files incrementally and without breaking the products that depend on it
- Designed and built the migration automation system the team runs on: a migration index, component parity tracker, and repo-wide automated checks that gate every change. Agents handle the mechanical conversions while engineers own the API and edge-case calls, turning a years-long migration into a repeatable system
- Built a self-hosted visual-regression system, favored over a commercial SaaS subscription, that scales with higher PR volume from migration automation at a fraction of the cost
- Set the implementation bar for design fidelity, semantics, accessibility, and interaction detail, steering other engineers' contributions and partnering with design to carry their intent into finished product states
- Authored the library's most complex components (selects, filters, tables), separating behavior from composition so logic and UI layers can evolve independently
- Rebuilt the icon system end-to-end, from Figma to tree-shakable React, migrated every legacy icon to it, and blocked new legacy imports with automated checks

TypeScript, React, CSS Modules, Stencil, Storybook, Vitest, Playwright, Nx, ESLint

Senior Front-End Engineer Sep 2019 – Oct 2021

Aspire (aspireiq.com) Toronto, Canada · Remote

- Core engineer on the component library behind Aspire's influencer-marketing platform
- Built metrics, data-visualization, and other product features across the influencer-marketing platform

TypeScript, React, SASS, D3, Python

Front-End Engineer Aug 2016 – Aug 2019

Iress (iress.com) Sydney & Melbourne, Australia

- One of the founding engineers on Iress's shared component library for wealth-management products, setting patterns other teams reused for years
- Overhauled product UIs to bring several wealth-management products onto the new library

TypeScript, React, SASS, UI Design

iOS Developer ZipMatch Manila, Philippines · 2015 – 2016

- Built an iOS real-estate app with virtual-reality property tours

Software Engineer Nokia Networks Manila, Philippines · 2013 – 2015

- Built internal web tooling, with shell and Python scripts for build automation and continuous integration

Swift, iOS, JavaScript, Python, CI/CD
