Re: [Role Title]

Hi [Company] team,

I'm interested in the [Role Title] role at [Company]. I am a Staff Front-End Engineer at Block/Square, based in Toronto, where I co-lead Market, Square's React design system library. My work spans accessible React components, frontend platform tooling, migration strategy, UI quality, and adoption across many product domains.

I am looking for a full-time employee role where I can work remotely from Toronto, Canada. I have worked successfully this way across North American time zones and am open to occasional travel for onboarding, planning, and important team moments.

If [Company] can support Canada-based employment, I would be glad to talk about how my frontend platform and design systems experience maps to the team.

Best,
Antonn
